ANNOUNCEMENT

OF THE

Chicago School of Dermatology,

For Special Clinical Instruction

—TO—

GRADUATES IN MEDICINE,

IN

Skin, Genito-Urinary, Rectal and
Renal Diseases.

605 W. Van Buren Street,

MEDICAL LIBRARY
CHICAGO.

In affiliation with the Chicago Hospital for Skin, Genito-Urinary and
Renal Diseases.

✦ ✦ FACULTY. ✦ ✦

HENRY J. REYNOLDS, M. D., PRESIDENT, 163 STATE STREET,
PROF. OF DERMATOLOGY AND GENITO-URINARY SURGERY.

Prof. of Dermatology, College of Physicians and Surgeons, Chicago;
Prof. of Skin and Genito-Urinary diseases, Chicago Polyclinic,
Chief Dermatologist to the West Side Free Dispensary, Chicago;
Genito-Urinary Surgeon to the West Side Free Dispensary, Chicago;
Dermatologist and Genito-Urinary Surgeon to the Hospital for Skin,
Genito-Urinary and Renal diseases, Chicago.

ARTHUR R. REYNOLDS, M. D., SECRETARY, 229 DIVISION ST.,
PROF. OF RENAL AND VENEREAL DISEASES.

Physician to the West Side Free Dispensary; assistant to the chair of
General Medicine and Physical Diagnosis, Chicago Polyclinic;
Physician for Renal Diseases to the Hospital for Skin, Genito-Urinary
and Renal Diseases, Chicago.

CHARLES V. BOGUE, M. D., 269 CHESTNUT STREET,
PROF. OF ANATOMY AND DISEASES OF THE RECTUM.

Rectal Surgeon to the Chicago Hospital for Skin, Genito-Urinary and
and Renal Diseases.

C. C. P. SILVA, M. D., 163 STATE STREET,
PROF. OF THERAPEUTICS.

Prof. of Therapeutics, College of Physicians and Surgeons, Chicago;
Prof. of Therapeutics, Chicago Ophthalmic College; Prof. of
General Medicine and Physical Diagnosis, Chicago Polyclinic.

JOHN A. BENSON, M. D., 163 STATE STREET,
PROF. OF PHYSIOLOGY, HISTOLOGY AND MICROSCOPY.

Prof. of Physiology, College of Physicians and Surgeons, Chicago.

T. B. WIGGIN, M. D.,
LECTURER ON ANATOMY AND CLINICAL ASSISTANT.
Physician to the West Side Free Dispensary.

TEXT BOOKS.

The following are among the best text-books:

Dermatology.—Robinson, Geo. H. Fox, Anderson, Duhring.

Genito-Urinary Diseases.—Van Buren and Keyes, Bumstead and Taylor, Otis, Thompson.

Renal Diseases.—Roberts, Beale, Stewart, Ralfe.

Diseases of the Rectum.—Kelsey, Allingham, Cripps.

Therapeutics.—Ringer, Wood, Bartholow.

Anatomy.—Quain, Gray.

Physiology.—Landois, Dalton, Kirk.

Histology.—Frey, Satterthwaite, Schaefer,

Microscopy.—Beale, Carpenter, Frey.

Pathology.—Ziegler, Green, Coates.

ANNOUNCEMENT.

The Chicago School of Dermatology, incorporated under the laws of the State of Illinois, was organized with a view to giving special clinical instruction in Skin, Genito-Urinary, Renal and Rectal diseases, to such practitioners as desire to further perfect their knowledge of these branches.

At this age every general practitioner recognizes the necessity or advantage of post-graduate instruction and it has therefore become the custom with many to spend their vacation in some of the large cities visiting the hospitals and dispensaries. Realizing that every general practitioner who has been busy and overworked for any length of time naturally inclines to give preference for, or special study to some particular branch or department of medicine, and from an increasing demand on them for special teaching, in the way of private classes, etc., the founders of this institution have been induced to endeavor to meet this demand by establishing the Chicago School of Dermatology. With the present and constantly increasing population of this city it should no longer be necessary, for the purpose of receiving these special clinical advantages, to visit European institutions.

It will therefore be the constant aim of the faculty to furnish everything in the way of clinical advantages and special instruction in these branches that can be obtained in Vienna, Berlin, Paris, or any of the other great cities.

COLLEGE BUILDING.

The college building is desirably located at 605 W. Van Buren street and is therefore best reached by the Van Buren line of street cars. It is being equipped with everything in the way of instruments, surgical appliances, microscopes, electrical apparatus, etc., that may be found necessary or useful in such an institution.

THE DISPENSARY

will be open daily from 2 to 4 p.m., when the class will have an opportunity of examining and treating patients, and making all the minor operations under the personal supervision and instruction of the professor of each department.

PLAN OF INSTRUCTION.

It is designed that the instruction shall be as nearly practical and clinical as possible. As there are, however, certain rudiments essential to the intelligent and thorough knowledge of any science, the course will be so arranged that those in need of such instruction will receive it.

DERMATOLOGY AND GENITO-URINARY SURGERY.

Prof. Henry J. Reynolds will endeavor to illustrate with clinical material and a large number of life-sized charts, all the various forms of skin disease liable to be met with in this or any other country; to exhibit under the microscope the various parasites capable of producing skin disease, and will illustrate the use of electricity in the permanent removal of superfluous hairs, and in the only successful method

for producing local anasthesia of the skin. He will give didactic and clinical instruction in the various methods of treating stricture of the urethra—including electrolysis—and in the various manipulations and operations necessary in the treatment of stone in the bladder, etc.

RENAL AND VENERAL DISEASES.

Prof. Arthur R. Reynolds will give clinical instruction, and didactic as far as necessary, in the diagnosis, prognosis and treatment of the various Renal and Veneral diseases, with the latest views of the most eminent authorities on these subjects, in this and foreign countries.

ANATOMY AND DISEASES OF THE RECTUM.

Prof. Bogue will give clinical and didactic instruction on the diseases of this specialty, including hæmorrhoids, ulceration, stricture and cancer of the rectum, etc., which so frequently complicate genito-urinary and skin affections, and will give each member of the class an opportunity to personally familiarize himself with the use of the various instruments and appliances necessary in their treatment. He will also, assisted by Dr. Wiggin, give such instruction in anatomy as will be necessary for a proper understanding of all the subjects taught in the school.

THERAPEUTICS.

Prof. Silva's course will be confined exclusively to the therapeutics appertaining to the various branches taught in the school, with special attention to electro-therapeutics.

PHYSIOLOGY, HISTOLOGY AND MICROSCOPY.

Prof. Benson will briefly discuss the physiological functions and the normal and pathological histology of the skin and other organs embraced in the subjects taught, and will give such instruction in the use of the microscope and the preparing of specimens as may be deemed necessary for the proper understanding of these specialties.

THE COURSE.

Commencing on Tuesday July 5, 1887, and the first Tuesday of each month thereafter until further notice is given, each course will continue daily except legal holidays, for four weeks.

As the clinical material forms largely the subjects for study each day, so the course of one month must naturally vary somewhat from that of another, and while everything will be comprehended as far as practicable in one course, it is the advice of the faculty that two or more sessions be attended by those who have the time at their disposal.

REQUIREMENTS FOR GRADUATION.

Before receiving the diploma of the school the candidate must present satisfactory evidence of the following qualifications:

1. Good moral character.
2. Graduation from a reputable medical college.
3. Attendance on one full course of lectures in this school.
4. Satisfactory examinations.

FEES.

Matriculation	\$ 5.00
Tickets to the first course, payable in advance . . .	30.00
Tickets to each additional course, payable in advance	15.00

TO UNDERGRADUATES.

Medical students or undergraduates may attend the course on any one of the branches taught in this school and receive an appropriate certificate therefor, upon payment of ten dollars; or they may attend the complete course on the same basis as practitioners but will not be granted the diploma of the school until after receiving the title of Doctor of Medicine.

THE HOSPITAL FOR SKIN, GENITO-URINARY AND RENAL DISEASES.

To supply the great and increasing demand in this class of special cases for better facilities for giving more systematic treatment and care than can possibly be given in boarding houses, hotels and most private residences, and with a view to the best interests of those attending the Chicago School of Dermatology a hospital has been established for the accommodation of this class of patients. This departure will be found a particularly desirable one by patients sent from a distance to remain in the city while receiving treatment for these diseases. The upper portion of the college building, which is located in a very healthy part of the city, is being neatly furnished, equipped and fitted up for this purpose, and consists of wards, single rooms for private patients, baths, etc. It will also contain a department for Diseases of the Rectum. It will therefore be used exclusively for patients afflicted with skin, genito-urinary, Rectal and Renal diseases: each department of which will

be under the personal supervision of the professor of the corresponding chair.

Such diseases as may be of an infectious character will be treated in a ward set apart for that purpose, to avoid all possibility of contagion, but no eruptive contagious fever cases will be received.

The management will be so conducted that the patients in each department shall be cared for in the most systematic and scientific manner. For instance, skin cases requiring such, will have medicated, electric and other baths at their command, may have inunctions properly applied, etc. Patients afflicted with diabetes may have the anti-diabetic diet treatment systematically carried out, etc.

Doctors taking the courses at the School of Dermatology are permitted and expected, when necessary, to assist in all operations and the general management of patients in this hospital when there is no objection on the part of the patient.

TO CORRESPONDENTS.

Physicians desiring to have patients treated in the hospital for Skin, Genito-Urinary and Renal diseases should address all communications to the Physician and Surgeon in charge, Henry J. Reynolds, M.D., 163 State St., Chicago.

All communications relative to the Chicago School of Dermatology should be addressed to the Secretary,

ARTHUR R. REYNOLDS, M. D.,
229 Division St., Chicago, Ill.

Chicago Ophthalmic College,

A CLINICAL SCHOOL OF

Ophthalmology, Otology and Laryngology, for Graduates in Medicine.

607 W. VAN BUREN STREET.

This institution was incorporated under the laws of the State of Illinois, March 19th, 1886.

Its founders aimed to supply the wants of physicians who desired to increase their knowledge of eye, ear, throat and chest diseases. To this end a suitable building, near the clinical center of the city, was secured and a hospital and dispensary established. At the outset, the building was considered amply large to meet all requirements for several years, but the success, attained the first year, demonstrated the fallacy of this idea, and one much larger and better adapted for the purpose is now occupied by the College and Hospital.

Few medical students before receiving their degree feel the importance, or have the opportunity of studying the specialties included in the curriculum of this College. Yet, after graduating in medicine, those who have not had personal clinical instruction in these branches find their deficiency in this respect a great detriment to their success as practitioners. While it is unnecessary for them to pay special attention to diseases of the eye, ear, nose and throat, it is a duty they owe to themselves and their patients, to be able to diagnose and properly treat all of the most common diseases peculiar to these organs.

A course of four weeks, at this college, enables each physician in attendance to witness all of the ordinary operations on the eye, ear, nose and throat. He will also receive personal drill in the use of instruments, employed in the diagnosis and treatment of all the diseases of these organs, with which he is likely to meet in practice.

Daily practice is given in the use of the ophthalmoscope and other necessary instruments, and in the correction of refractive errors.

The hospital and dispensary furnish abundant clinical material for demonstration.

FACULTY:

John E. Harper, A. M., M. D., President, 163 State St. Professor of Diseases of the Eye and Clinical Ophthalmology.

S. A. McWilliams, A. M., M. D., Vice President, 58 State Street. Professor of Diseases of the Chest and Physical Diagnosis.

J. Brown Loring, L. D., M. R. C. S. Eng., Secretary, 678 W. Lake St. Professor of Diseases of the Ear and Clinical Otology.

Geo. F. Hawley, M. D., 125 State St. Professor of Diseases of the Nose and Throat and Clinical Rhinology and Laryngology.

Oscar A. King, M. D., 70 Monroe St. Professor of Diseases of the Nervous System.

C. C. P. Silva, M. D., 98 Ogden Ave. Professor of Therapeutics.

F. E. Waxham, M. D., 243 State St. Professor of Clinical Laryngology and Rhinology.

C. A. Kelsey, M. D., 305 S. Oakley Ave. Professor of Histology and Pathological Anatomy.

G. Irwin Brinckerhoff, M. D., Professor of Clinical Ophthalmology.

Andrew Stewart, M. D., 329 W. Van Buren St. Professor of Clinical Otology.

Leo. Galitzki, Optician, Professor of Physical and Physiological Optics.

For Announcement and further Particulars, Address **J. Brown Loring, M. D.** Secretary, 678 W. Lake St., Chicago.
